

## World leading expertise supporting Carbon Capture, Use and Storage (CCUS) projects

AGR has been involved with CCUS projects for nearly two decades. During this time we have worked with Operators, certification consultancies, investors and regulators globally. They count on us to deliver expert consultancy across the scientific, technological and operational challenges in their drive to reduce CO<sub>2</sub> emissions through CCS technology.

Our clients look to us as a trusted partner who brings the right combination of multi-discipline engineering skills blended with commercial approach.

Expertise we deliver in key stages:

- Feasibility studies, including petrophysics, reservoir modelling and simulation of CO<sub>2</sub> plume movement
- CO<sub>2</sub> injection for enhanced oil recovery
- Storage site screening and characterisation for potential CO<sub>2</sub> storage and third party verification
- Assessment and mitigation of the risks associated with CO<sub>2</sub> leakage
- Drilling, completion and injection tests of CO<sub>2</sub> wells
- Certification of CO<sub>2</sub> storage according to ISO27914

Our clients choose us for our proven track record in diverse scale of CCS projects globally.

**30+**

Active years in the business

**550+**

Well projects managed

**20+**

Years average industry experience of our Subsurface & Asset Evaluation team

**400+**

Highly experienced experts globally helping our clients achieve their ambitions

**5,000,000+**

Total length in feet drilled globally

**0**

Major incidents reported

From subsurface evaluation to the drill bit - AGR is well-placed to support at every stage in your CCS project's lifecycle.
