

# reStore™ - Storage of Reserves and Resources

## Organise your reserves and resources data

The most valuable assets for an E&P company are its reserves and resources. reStore™ offers industry-leading tracking and storing functionality of these valuable assets by enhancing evaluations and project investment decisions at all levels of the organisation.

With over 30 years in the industry, AGR has established a reputation for being a trusted provider of independent specialist consultancy within reservoir studies and reserves management. Combining our asset evaluation and digitalisation skills, reStore™ utilises a cloud-based database that simplifies compliance with regulatory requirements.

### Features

- Compliant with common reporting standards (PRMS, SEC, NPD)
- Log in control
- Tailored unit system for reports and assets
- Company specific currencies
- Plot functionality
- Full Version Control
- Company specific tags
- Input monthly or yearly data
- Data import and export with Microsoft Excel
- File locking technology
- In-line with Norwegian RNB reporting.

### Benefits for you

- Safe and quality-controlled storage of reserves and resources data
- Increased efficiency in gathering, processing and extracting data
- Trustworthy data library of reserves and resources for any type of strategic, financial and regulatory action
- Empowered collaboration and task sharing
- Minimise human error
- Full control of access
- Easy and efficient comparison of revisions
- No troublesome software installation
- Plug and play with access to the latest version and new features.

The system can also be used as a casebook to track and analyse different scenarios.
